

Providing real power generation solutions.

We are all about making a difference for you - focusing on a tailored solution to match your exact power requirements. We pride ourselves in getting to know your needs fully. We typically analyse a number of important factors (e.g. load, profile forecasts, fuel consumption, transport restrictions, servicing and operational ease) before we finalise a custom designed solution, for no two solutions to a power supply need are usually the same. We understand that power generation represents a significant investment, and to achieve the best return on that investment we work closely with you and your consultants to produce the most efficient and reliable solutions. Only by considering the appropriate issues, from the benefit of experience and industry knowledge, will we ensure the best solution for you. This approach generates a world of difference to you and keeps us ahead of our competition.

Our products are designed by us and are engineered to the highest standards to perform hour after hour, day after day, week after week and year after year in some of the most challenging environments on the planet.

It's our commitment to quality and high service standards that delivers the reliability you need.

We understand better than most that power is a necessity not a luxury. It is what our organisation is built on, and we aim to be the best.

With our strategic service and support centres throughout Australia we are able to respond efficiently to the challenges that temporary and remote power requirements bring. We don't just say it, we live it. Our service technicians are safety trained & inducted and on call 24/7/365. It's this dedicated team of customer-centric employees that makes the difference between Portable Power and the rest.

Whether our difference comes from our excellent equipment, our assurance to service, our accessibility, or our years of knowledge, you can be certain you have chosen the best when you select Portable Power.

60 kVA Super Silent Generator

1,250 kVA Containerised Mine Spec Genset

DNV Lifting Frame with Offshore Generator

Benefits / Features:

- Equipment – Large fleet of modern Power Generation Equipment ensures availability at most times ranging from 20kVA to 1250kVA
