Fleet Care's reactivation team is ready to work with your crew around the world.

Is your rig ready for your next contract?

Rapid rig reactivation

You can avoid unnecessary downtime and complications on idle equipment with a short inspection by your OEM prior to use. Components and spare parts that have been in storage for a long time may have been impaired. Let us help you ensure a safe and quick startup with our team of experts who are ready to assist.

We can dedicate our resources to coordinating and helping you mobilize quickly. Our experts can help your team prepare the rig for contract, saving you time and money.

Are you performing the proper preventive maintenance once your rig is up and running?

Preventive maintenance will assist you in safely extending the life cycle of your equipment and your rigs. The right preventive maintenance will reduce failure and unexpected challenges with your equipment. Along with start-up support to ensure your rig is ready to go, we can also help you prepare a tailor-made preventive maintenance program that is ready to go when operations begin.

We can offer you

- Inspection services
- Oil analysis and change
- Overhauling programs
- OEM spare parts
- Filter changes
- Visual survey together with our experts
- Preservation of components
- Technical inspection of reserve spares

We look forward to assisting you in a quick start-up to meet your customers' needs. Contact us today at fleetcare@nov.com.

Fleet Care is about ensuring your success back in the field.
