

TorqueFlex eConsole Upgrades

Boost safety, visibility, and reliability in your workshop.

The TorqueFlex™ electronic console (eConsole) already helps you automate your TorqueMaster™ operations with consistent control, reduced wear and tear, and detailed torque/time logging. Now, we've added three upgrades that give you more protection, more visibility, and more uptime.

ViewMaster

8153-B-2

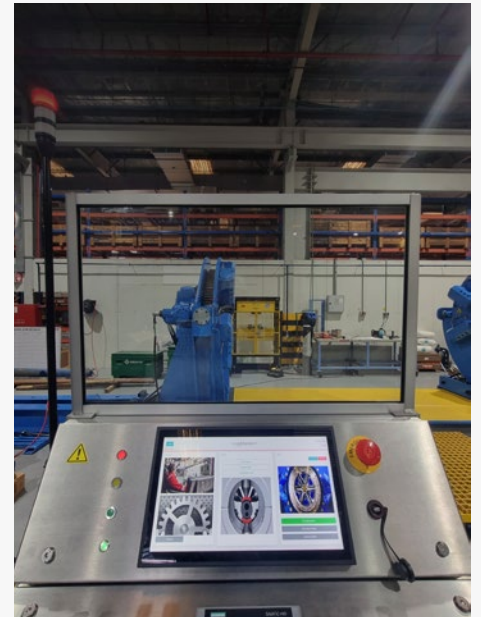

The ViewMaster provides a clear, real-time view of the tubular right from the eConsole. A 12-in. HD screen streams live video from cameras on the TorqueMaster Headstock and Tailstock. Encased magnetic mounts protect the cameras and enable them to detach safely in case of impact. Built-in lighting brightens the work area, making it easier to see and clamp exactly where you need. With the ViewMaster, your operations become faster, safer, and more precise.

UPS System

8160-A-2

The UPS system keeps your eConsole running, even if the power goes out. Its reliable battery backup maintains operation during short outages and gives you enough time to safely complete an operation during longer ones. It also protects against brownouts, surges, and line noise that can damage equipment or cause costly downtime. With the UPS system, you can trust your eConsole to stay online and your data to stay secure.

Safety Shield

8160-B-5

The polycarbonate safety shield mounts to the eConsole, creating a clear barrier between you and the TorqueMaster unit. It protects against unexpected debris while still giving you full visibility. Built to last, the shield resists impact, UV exposure, and fire. With this added layer of protection, you keep your focus where it belongs.
