

RigOptix

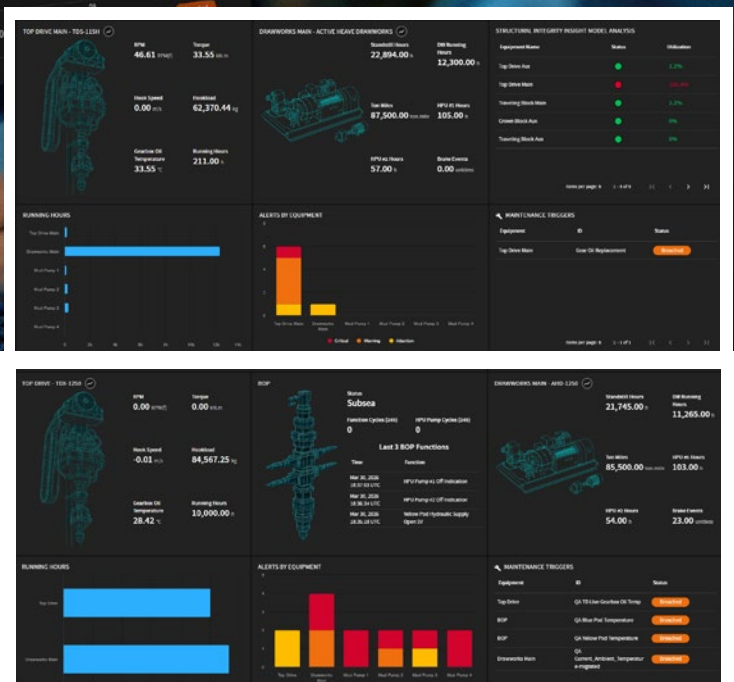

Intelligence that powers smarter operations and maintenance.

RigOptix™, NOV's next-generation digital platform, delivers real-time visibility into equipment health, condition, and integrity, combining monitoring, analytics, and AI-driven insights to enable faster, more informed decisions.

It integrates equipment data, analytics, and intuitive dashboards into a unified view, enabling earlier detection of abnormal behavior and supports faster, more informed maintenance decisions.

RigOptix continuously collects and analyzes data from topside and BOP equipment, transforming it into clear, actionable insights that drive better decisions.

Move beyond reactive maintenance to reduce downtime, improve equipment availability, and support condition-based maintenance.

Features and Benefits

- Gain clear visibility into equipment health, condition, and maintenance needs
- Continuous monitoring across topside and BOP equipment
- Early detection of anomalies to prevent unplanned downtime
- Enable faster response with configuration alerts and notifications
- Access real-time and historical insights through intuitive dashboards
- Supports condition monitoring and condition-based maintenance strategies
- Drive informed operational and maintenance decisions through integrated analytics
- Reduce maintenance costs and minimize non-productive time
