

Monitor operations wherever you are.

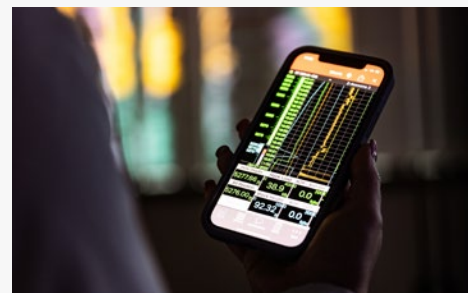

Our WellData™ 4.0 remote monitoring solution provides critical drilling information anywhere in the world, as if at the wellsite. Whether viewing online or through the mobile app, never be more than a click away from managing your operations.

With streaming access to depth and time series data—surface and down-hole—and context data from the rig, such as IADC tour sheets, WellData 4.0 delivers the data you need, how and where you need it. Its feature-rich tool kit enables you to easily analyze well performance against offset wells, identify potential upcoming trouble spots, and oversee drilling efficiency across your fleet.

Available on NOV's Max Platform™, our integrated applications provide a single version of the truth, enabling the wellsite and office to share insights in real time to drive operational efficiency.

Features and Benefits

- One-click navigation to what's important
- Unlimited channels at 1-second resolution provide drilling efficiency clarity
- Proactively look ahead for potential trouble spots
- Compare active well performance against offsets in real time
- Interactive KPIs for immediate insights
- View rig reports or export to multiple formats
- Extend capabilities with integrated or Max Partner applications

Your Data — Made Easy™
