

CAPstone

Work smarter, from office to rig.

Your Connected Automation Platform

CAPstone extends your digital workflows directly to the rig. No new systems to learn. No data to re-enter.

Whether you're working in a well planning platform, logistics tool, or KPI dashboard, CAPstone lets you push data straight into rig execution and receive live updates back, all in near real time.

Each application requires a simple, one-time integration. Once connected, it scales across your fleet and installs in minutes on any rig with NOV controls connected with a DataVault.

It is fully software-based, deployed remotely, and designed to work within your existing tools without disrupting operations.

CAPstone turns your rig into a live endpoint in your digital ecosystem. It enables smarter, faster, and more collaborative drilling.

Features and Benefits

- Works with your existing tools: well planning, logistics, KPIs, and more
- No new platforms to learn. Stay in the systems you already use
- Push data directly to the rig. Eliminate re-entry and delays
- Real-time feedback from the rig into your own dashboards
- One-time integration per app. Then deploy fleetwide in minutes
- Fully software-based. No hardware and no rig disruption
- Enables smarter, remote drilling that is faster, safer, and more consistent
