

Blak-JAK Torque Pro Lite

Hammerless valve cover retention system

The Blak-JAK® Torque Pro Lite™ utilizes a hydraulic wrench to tighten and loosen the valve cap retainer and improves safety by eliminating the need for hammers.

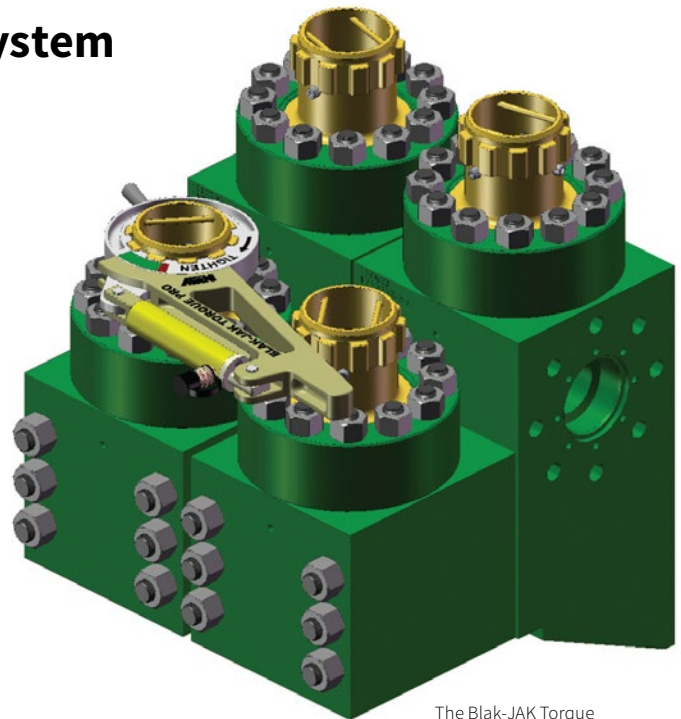

As with other Blak-JAK systems, the Blak-JAK Torque Pro Lite uses hydraulic over mechanical retention, and no hydraulics stay on the pump while the pump is in operation. This system works with OEM valve covers as well as Mission® “L” style plugs. No modification to the fluid end is required.

Models available

- National 8-P-80, 9-P-100, and 10-P-130
- Oilwell A1700-PT with OEM modules
- Continental Emsco F-800, F-1000, FB-1300, and FB-16000
- Gardner Denver PZ-7, PZ-8, PZ-9, PZ-10, and PZ-11

Features and benefits

- Eliminates need for hammers
- Hydraulic wrench to tighten and loosen
- Ensures a constant retainer thread torque for longer valve cover and gasket life

The Blak-JAK Torque Pro Lite is Patent Pending.
